Homer's King Nestor of "sandy Pylos" passes from legend into history in this first volume of the report of excavations on a hill called Englianos in Messenia, conducted by the Archaeological Expedition of the University of Cincinnati. The palace with its contents and the surrounding lower town indicate that this was an administrative center and the capital of a prosperous Mycenaean kingdom. The name Pylos appears on more than fifty tablets, and there can be no doubt that this was the Messenian abode of the Nestor of Greek tradition. Destroyed by fire at the end of the 13th century B.C., and never reoccupied, the palace has lain for more than 3,000 years in ruins. During the annual campaigns of the Expedition between 1952 and 1964, it emerged as a complex of four separate structures of considerable size. The floors, stumps of wall bearing plaster with painted decorations, doorways, and other evidence helped to identify gateways, courts, porticoes, vestibules, corridors, a great throne room, storerooms, a wine magazine, pantries filled with pottery, a bathroom, stairways, and a repair shop. Except for the tablets, seals, and frescoes, which will be described in other volumes, all the finds are recorded and illustrated with plans, drawings, and photographs. Originally published in 1966. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Wine production was clearly an important activity in the Mycenaean Palace economies as Linear B tablets make clear. However the archaeological evidence for prehistoric vintners has never been systematically evaluated before this book, partly because of the scholarly divided between Linear B scholars and excavators. The author here, however, draws on both kinds of evidence to discuss an industry that reveals much about the relationship of Palaces to ordinary people, and about the way in which Pylos, Knossos and other Palaces bolstered their power bases. Contents: Background to Wine as an Agricultural Commodity; The Development of the Wine Ideogram; Mycenaean Vocabulary in Reference to Viticulture and Wine; Derivatis of 'dateomai' and the Distribution of Wine; Wine in the Pylos Commodity Tablets; Wine in the Knossos Fs Tablets; The Impressed Nodules from the Wine Magazine at Pylos; Wine in the Knossos and Mycenae Tablets; The Place of Wine in the Mycenaean Palace Economy.

Wheat breeders have achieved significant results over the last fifty years in research on

mankind's one of the most important crops. Classical genetic and breeding methods, far broader international cooperation than was experienced in earlier periods, and improvements in agronomic techniques have led to previously unimaginable development in the utilisation of wheat for human consumption. The contribution of wheat researchers is particularly noteworthy since these results have been achieved at a time when the world population has grown extremely dynamically. Despite this demographic explosion, of a proportion never previously experienced, thousands of millions of people have been saved from starvation, thus avoiding unpredictable social consequences and situations irreconcilable with human dignity. Despite these developments in many regions of the world food supplies are still uncertain and the increase in the world's wheat production has not kept pace with the population increase during the last decade. Due to the evils of civilisation and the pollution of the environment there is a constant decline in the per capita area of land suitable for agricultural production. Based on population estimates for 2030, the present wheat yield of around 600 million tonnes will have to be increased to almost 1000 million tonnes if food supplies are to be maintained at the present level.

This anthology is an attempt to make sense of conferences and trade fairs as phenomena in contemporary society. The authors describe how these large-scale professional gatherings have become key sites for making and negotiating both industries and individual professions. In fact, during the past few decades, conferences and trade fairs have become a significant global industry in their own right. The editors assert that large-scale professional gatherings are remarkable events that require deeper analysis and scholarly attention.
