## Computational and Experimental Simulations in Engineering

After enjoying years as a popular journalist and poet, intellectual and freethinker Gerald Massey turned his vast studies in the field of Egyptology into *A Book of the Beginnings*, a bold statement that the origin of all civilization lays in ancient Egypt. His assertions, radical at the time--indeed, almost a century before the discovery of three-million-year-old human remains in Africa--resonate loudly today, when molecular biology is making corresponding discoveries alongside the still-raging creation-versus-evolution controversy. In Volume II, Massey intelligently argues an Egyptian origin for Biblical symbology, lexicography, and mythology. Here, he not only asks if the oldest Jewish and Christian axioms were really born on the banks of the Nile, he offers a stalwart and profound "Yes!" British author GERALD MASSEY (1828-1907) published works of poetry, spiritualism, Shakespearean criticism, and theology, but his best-known works are in the realm of Egyptology, including *The Natural Genesis* and *Ancient Egypt: The Light of the World*.

*Opportunities and optimism in Aging. Issues in Aging*, 3rd edition takes an optimistic view of aging and human potential in later life. This book presents the most up-to-date facts on aging today, the issues raised by these facts, and the societal and individual responses that will create a successful old age for us all. Mark Novak presents the full picture of aging--exhibiting both the problems and the opportunities that accompany older age. The text illustrates how generations are dependent on one another and how social conditions affect both the individual and social institutions. Learning Goals -Upon completing this book, readers will be able to:

- Understand how large-scale social issues--social attitudes, the study of aging, and demographic issues--affect individuals and social institutions
- Identify the political responses to aging and how individuals can create a better old age for themselves and the people they know
- Separate the myths from the realities of aging
- Recognize the human side of aging
- Trace the transformation of pension plans, health, and opportunities for personal expression and social engagement to the new ecology of aging today

*Imagining Global Amsterdam* gaat over het beeld van Amsterdam in film, literatuur, visuele kunst en in het moderne stedelijke discours, in het bijzonder in de context van de mondialisering. De essays gaan onder andere dieper in op Amsterdam als een lieu de m é moire van de vroeg-moderne wereldhandel. Wat betekent deze herinnering in de hedendaagse cultuur? Waarom verwijzen zo veel contemporaine films en romans naar dit verleden terug? Ook het (inter)nationale imago van Amsterdam als een multicultureel en ultra-tolerant ' %x;global village ' %x; komt aan bod. Waarom is dit beeld zo persistent, en hoe heeft het zich in de loop van de laatste decennia ontwikkeld? Tot slot wordt ingegaan op de vraag hoe mondialiseringsprocessen ingrijpen in de stadscultuur, zoals in het prostitutiegebied op de Wallen en via de erfgoedindustrie. Hoe manifesteert de mondialisering zich in de stad, en welke rol speelt beeldvorming daarbij? Deze bundel vormt een rijk geschakeerd onderzoek naar de relatie tussen Amsterdam, mondialisering en stedelijke beeldvorming. This book investigates architectural and urban dimensions of the ethnic-nationalist conflict in Sarajevo, the capital of Bosnia and Herzegovina, during and after the siege of 1992–1995. Focusing on the wartime destruction of a portion of the cityscape in central Sarajevo and its post-war reconstruction, re-inscription and memorialization, the book reveals how such spatial transformations become complicit in the struggle for reconfiguration of the city's territory, boundaries and place identity. Drawing on original research, the study highlights the capacities of architecture and urban space to mediate terror, violence and resistance, and to deal with heritage of the war and act a catalyst for ethnic segregation or reconciliation. Based on a multi-disciplinary methodological approach grounded in architectural and urban theory, the spatial turn in critical social theory and assemblage thinking, as well as techniques of spatial analysis, in particular morphological mapping, the book provides an innovative spatial framework for analyzing the political role of contemporary cities. isolated and snowbound hotel. Get ready for what Kirkus calls "A bloody, wonderfully creepy scare ride." When her mom inherits an old, crumbling mansion, Seda's almost excited to spend the summer there. The grounds are beautiful and it's fun to explore the sprawling house with its creepy rooms and secret passages. Except now her mom wants to renovate, rather than sell the estate—which means they're not going back to the city...or Seda's friends and school. As the days grow shorter, Seda is filled with dread. They're about to be cut off from the outside world, and she's not sure she can handle the solitude or the darkness it brings out in her. Then a group of teens get stranded near the mansion during a blizzard. Seda has no choice but to offer them shelter, even though she knows danger lurks in the dilapidated mansion—and in herself. And as the snow continues to fall, what Seda fears most is about to become her reality...

A Book of the Beginnings

Plagues in World History provides a concise, comparative world history of catastrophic infectious diseases, including plague, smallpox, tuberculosis, cholera, influenza, and AIDS. John Aberth considers not only their varied impact but also the many ways in which people have been able to influence diseases simply through their cultural attitudes. Our ability to alter disease, even without modern medical treatments, is even more crucial lesson now that AIDS, swine flu, multidrug-resistant tuberculosis, and other seemingly incurable

illnesses have raged worldwide. The author's comparative analysis of how different societies have responded in the past to disease illuminates what cultural approaches have been and may continue to be most effective in combating the plagues of today. The second book in a romantic and drama-packed trilogy perfect for fans of Rachel Vincent, Julie Kagawa, and Alyson Noel. Lusciously romantic and full of action-packed drama, readers will be swept away by this thrilling novel. Dawn Montgomery knows that monsters really do come out at night—after all, they are her job. It's just after the thirty-year war between vampires and humans, and as an ambassador between the two sides (a role she inherited when her parents were killed), Dawn quickly learns that balancing schoolwork, teen life, and the requests of Lord Valentine, the most frightening vampire in the region, isn't easy. There's nowhere left to hide. I thought vampires were our enemies—they controlled our lives, isolated our cities, and demanded our blood—until I met Victor. With Victor taking over as the new Lord Valentine, things were supposed to get better. Instead, they're worse than ever. Day Walkers, a new breed of vampires who can walk in the sun, are terrorizing the city. Blood supplies are low, and if Victor's vampires don't get enough, they will become infected with the Thirst—a disease that will turn them into mindless killers. To stop it, I must journey across the desolate wasteland to the very place where the sickness began. I can only hope that the answers that await me are enough to save us all...before it's too late. The introduction of the operating microscope as a surgical tool revolutionized the treatment of peripheral nerve lesions. A new era thus began in the early 1960s, which led to a substantial improvement in the management of nerve lesions. The results of nerve grafting techniques have demonstrated that, independent of the length of the defect, lesions can be successfully bridged. The free tissue transplants with microvascular anastomosis have also opened new, rewarding possibilities for peripheral nerve reconstruction procedures, facilitating the achievement not only of satisfactory anatomical but also of satisfactory functional results. In order to evaluate the state of the art and reflect retrospectively on 25 years of microneurosurgical treatment of peripheral nerves, numerous outstanding scientists and clinicosurgical physicians were invited to Hanover in order to exchange their viewpoints and experiences. An active and fruitful discussion resulted which dealt with the many aspects of anatomy, pathology, clinical and neurophysiology, diagnosis, and with the surgery and physiotherapy which constitute modern-day peripheral nerve lesion treatment. The exciting ongoing experimental and clinical activities have led us to support the wish and idea to publish the scientific exchange which took place during the Hanover symposium. I truly believe that the articles presented in this book cover so many interesting subjects concerned with peripheral nerve lesions that the book will serve the interested and dedicated physician involved with such cases as a reference work for the basics and also provide him with the therapeutic guidelines to assist him in his daily work. His unique approach has worked in marvellous ways. Poon Tip has created an entirely new and refreshing approach to management. For example, there is no CEO at G Adventures - instead, every employee is a CEO, empowered to make instantaneous decisions to help clients on the spot. But while there's no CEO, there is a company Mayor, who take the pulse of corporate morale. There's no HR department - but there is a Talent Agency and company Culture Club. It hasn't always been easy to try to balance his desire for a socially responsible company along with the desire to generate profits. But thanks to Poon Tip's vision, G Adventures has flourished and has done its best to maintain its looptail approach. In short, it's been an extraordinary ride, and in many ways G Adventures is at the vanguard of what modern-day companies are beginning to look like.

This paper explores how prudential regulations can support monetary policy in reducing output fluctuations while maintaining financial stability. It uses a new framework that blends a standard model for monetary policy analysis with a contingent claims model of financial sector vulnerabilities. The results suggest that binding countercyclical prudential regulations can help reduce output fluctuations and lessen the risk of financial instability. More specifically, countercyclical rules such as countercyclical capital adequacy rules, can allow monetary authorities to achieve the same output and inflation objectives but with smaller adjustments in interest rates. The countercyclical rules can help stem swings in asset prices, lean against a financial accelerator process, and thereby help to lower risks of macroeconomic and financial instability. In economies with fixed exchange rates, where countercyclical monetary policy is not possible, prudential regulations can provide a useful mechanism for mitigating a run-up in asset prices and for promoting output stability. This book focuses on a little-known corpus of testimonial accounts published by French women deported to Nazi camps, and will be of interest to those studying modern French literature, women's studies and the Holocaust. Switched reluctance motors have steadily increased in commercial importance since their introduction in the early 1980's, while their technology - especially of their electronic control - has made great progress. Their unique characteristics introduce a delicate balance, in which the copper and iron are diminished in quantity, complexity and cost, in favour of a greater reliance on sophistication in the controller. Thus mastery of the control is the key challenge in the application of these machines. This book is intended for engineer's in industry and in the large research community in electrical machines and drives. It introduces the techniques for controlling switched reluctance machines, starting from first

principles and building up to the most advanced forms of sensorless control. It covers the recent advances in electronic control and includes aspects of motion control, automation, acoustic noise reduction and energy efficiency. ICCES covers all aspects of applied sciences and engineering: theoretical, analytical, computational, and experimental studies and solutions of problems in the physical, chemical, biological, mechanical, electrical, and mathematical sciences. As such, the book discusses highly diverse topics, including composites; bioengineering & biomechanics; geotechnical engineering; offshore & arctic engineering; multi-scale & multi-physics fluid engineering; structural integrity & longevity; materials design & simulation; and computer modeling methods in engineering. The contributions, which were selected by means of a rigorous international peer-review process, highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations. Incorporating both new and now-classic essays, this book sets the vocal works of Modest Musorgsky in a fully detailed cultural, political, and historical context, elevating the composer's image over other biographers. School buildings have a crucial contribution to make to raising educational achievement.

Designing high performance school buildings for the 21st century for all children is a shared concern amongst OECD countries. Innovative research seeks architectural answers that make efficient use of the resources invested in building, renovating and running schools.

Changes in the design of those buildings must serve the educational process and improve the quality of the learning environment. A major challenge is to secure the best possible design input to deliver schools that will meet future needs and expectations and offer a positive environment that supports learning and teaching.
