The Internet has become humanity's invisible central nervous system, connecting us at the speed of thought. More people today have access to mobile phones than have access to clean drinking water. Yet the most important technology is still the one within us: our brain, body, and consciousness. A fast-paced career in the high-tech industry combined with a deep yoga and meditation practice has allowed Gopi Kallayil—Google's Chief Evangelist for Brand Marketing and one of the leading voices encouraging yoga and mindfulness

in the workplace today—to integrate his inner and outer technologies to a remarkable degree. Wisdom from his yoga mat and meditation cushion guides his professional career, and his work life provides the perfect classroom to deepen his wisdom practice. The Internet to the Inner-Net guides the rest of us to do the same. In some three dozen wide-ranging, sometimes provocative essays, Gopi shares his experiments in conscious living and offers insight, inspiration, and rituals—including yoga, mindful eating, and even napping—to help us access our own inner worlds. If you're looking for grounded practical wisdom that might simultaneously help you become more creative, adaptable, enthusiastic, effective, or resilient, you'll find

it in this user's manual for the technology within—along with colorful insight into the successful Google culture. In five sections, from "Log In" (which offers mindful ways of connecting and engaging) to "Clear Out Your In-Box" (shedding what doesn't serve you to make space for what does) to "Thank You for Subscribing" (a reminder to live with gratitude), Gopi lays out practices and perspectives that you can use starting right now to live with more purpose, fulfillment, and joy. Army participation in the LEED(registered name) for Homes Pilot Program is intended to facilitate preparations and transition from SPiRiT to LEED for Homes as soon as it is ready for adoption. The pilot program will coincide with U.S. Green Building Council (USGBC) development of the LEED for Homes

evaluation tool. The Office of the Assistant Chief of Staff (Installation Management) Housing Division has overall responsibility for the transition and has selected Norfolk District, Center of Standardization for Family Housing to facilitate and coordinate participation in the LEED for Homes Pilot Program. A team consisting of Army personnel experienced in Army Family Housing (AFH) and/or sustainability conducted site visits to AFH at Fort Lee, VA and Fort Huachuca, AZ. Both installations have a history of successful AFH projects and current projects under construction that used SPiRiT as a sustainability rating tool. LEED for Homes was applied to each AFH project. Further, each credit was evaluated for applicability to Army projects and its ease of application using current design guidelines. Where appropriate, feedback was provided to the USGBC regarding issues, concerns, or clarifications on particular credits. The team also defined several Innovation and

Design credits that could universally apply to AFH projects. Twenty-five years ago, how many people were thinking about the internet on a daily basis? Tamara Ghandour, author, podcaster, keynote speaker and founder of innovation training company, LaunchStreet, used to believe that innovation was the domain of a select few, exclusive to certain industries, or relegated to a specific job role. But, as Tamara discovered in her 25 years of work and research, everybody has the capacity to innovate. It's a person's unique innovation style, (which can be assessed and channelled), that can transform inertia into innovation. Drawing on eye-opening data from her proprietary Innovation Quotient Edge Assessment, Innovation is Everybody's Business is for those looking for solutions to the daily pain of "how do I prove my worth," a reality for many people whether they work in the C-Suite or on the front-lines. This book will resonate with those that recognize that being more

innovative is their ticket to being indispensable. It is also for leaders under pressure to build a culture of innovation but don't know how. As organizations face pressure to innovate, the accountability for making it happen falls on senior and mid-level leaders. They are told what to do, but not how to do it. This book will give them a tool to build a team of innovators who make an impact every day in big and small ways.

- 1000-Day Meal Plan – Let's face it: thinking about what to cook is exhausting, and if you add in the worry of falling back into bad habits, it's the perfect recipe for disaster! But don't worry: with our meal plan, you won't have to think about anything; it's all already organized for you. The time for sad meals is now over! Click "Buy Now" and cook like a pro!

Mastering the Nikon D850 by Darrell Young provides a wealth of experience-based information and insights for

owners of the new D850 camera. Darrell is determined to help the user navigate past the confusion that often comes with complex and powerful professional camera equipment.

This book explores the features and capabilities of the camera in a way that far surpasses the user's manual. It guides readers through the camera features with step-by-step setting adjustments; color illustrations; and detailed how, when, and why explanations for each option. Every button, dial, switch, and menu configuration setting is explored in a user-friendly manner, with suggestions for setup according to various shooting styles.

Darrell's friendly and informative writing style allows readers to easily follow directions, while feeling as if a friend dropped in to share his knowledge. The information in this book goes beyond the camera itself and also covers basic photography technique.

Traditionally, the way to test a product's reliability was to build it--and then try to break it. As systems and technologies improved, TAAF (Test, Analyze and Fix) methodologies were developed and adopted. In today's global economy, with its short, technologically-intense product life cycles, TAAF cannot suffice. Reliability can no longer be a step or a series of steps in product development; it is something that needs to be acknowledged up front and built into the product from its very conception. Reliability, in other words, must be 'designed in.' Product developers now have many tools--software and hardware--at their disposal for building reliability in from the get go. From the organizational point of view, what better way to design in reliability than to make designers themselves responsible for the reliability of their designs? As "Mike Silverman" explains in "How

Reliable is Your Product?," this is why the role of the reliability engineer is changing to one of mentor. Product developers are now responsible for going out and finding the best testing tools and then training the designers on their use, so that designers factor and build in reliability at every stage of product design. Mike has focused on reliability throughout his 25-year career, and has observed the position of reliability in the organization evolve. In this book, he condenses his expertise and experience into a volume of immense practical worth to the engineering and engineering management communities including designers, manufacturing engineers and reliability/quality engineers. Among other things, Mike discusses how reliability fits, or should fit, within the product design cycle. He provides a high-level overview of reliability techniques available to engineers today. He lucidly discusses the design of experiments and the role of failure management. With case studies and narratives from personal experience, Mike discusses optimal ways to utilize different reliability techniques. He highlights common errors of judgment, missteps and sub-optimal decisions that are often made within organizations on the path to total reliability. With "How Reliable is Your

Product?" "Mike Silverman" has delivered what few have done before--a comprehensive yet succinct overview of the field of reliability engineering and testing. Engineers and engineering managers will find much in this book of immediate, practical value. In the early 1960s, a second home at the beach was a snap even for the working class. Canada, May 13-16, 2007, Proceedings Many engineering, operations, and scientific applications include a mixture of discrete and continuous decision variables and nonlinear relationships involving the decision variables that have a pronounced effect on the set of feasible and optimal solutions. Mixed-integer nonlinear programming (MINLP) problems combine the numerical difficulties of handling nonlinear functions with the challenge of optimizing in the context of nonconvex functions and discrete variables. MINLP is one of the most flexible modeling paradigms available for optimization; but because its scope is so broad, in the most general cases it is hopelessly intractable. Nonetheless, an expanding body of researchers and practitioners — including chemical engineers, operations researchers, industrial engineers, mechanical engineers, economists, statisticians, computer scientists, operations managers, and mathematical programmers — are interested in solving large-scale MINLP instances. Helps both engineers and students improve their writing skills by learning to analyze target audience, tone, and purpose in order to effectively write technical documents This book introduces students and practicing engineers to all the components of writing in the workplace. It teaches readers how considerations of audience and purpose govern the structure of their documents within particular work settings. The IEEE Guide to Writing in the Engineering and

Technical Fields is broken up into two sections: "Writing in Engineering Organizations" and "What Can You Do With Writing?" The first section helps readers approach their writing in a logical and persuasive way as well as analyze their purpose for writing. The second section demonstrates how to distinguish rhetorical situations and the generic forms to inform, train, persuade, and collaborate. The emergence of the global workplace has brought with it an increasingly important role for effective technical communication. Engineers more often need to work in cross-functional teams with people in different disciplines, in different countries, and in different parts of the world. Engineers must know how to communicate in a rapidly evolving global environment, as both practitioners of global English and developers of technical documents. Effective communication is critical in these settings. The IEEE Guide to Writing in the Engineering and Technical Fields Addresses the increasing demand for technical writing courses geared toward engineers. Allows readers to perfect their writing skills in order to present knowledge and ideas to clients, government, and general public. Covers topics most important to the working engineer, and includes sample documents. Includes a companion website that offers engineering documents based on real projects. The IEEE Guide to Engineering Communication is a handbook developed specifically for engineers and engineering students. Using an argumentation framework, the handbook presents information about forms of engineering communication in a clear and accessible format. This book introduces both forms that are characteristic of the engineering workplace and principles of logic and rhetoric that underlie these forms. As a result, students and practicing engineers can improve their writing in any situation they encounter, because they can use these principles to analyze audience, purpose, tone, and form. This inspirational book contains the guiding principles to help you become a successful property investor. Whether you want to invest in buy-to-let, have a go at some development projects, or take a calculated risk on some speculative opportunities you can succeed if you follow the essential rules in this book. You will discover how to:

- Think, act and live like a successful property investor
- Develop the skills needed to identify potential opportunities
- Undertake buy-to-let and refurbishment projects which make money
- Develop the techniques and skills you need to manage the cash flows
- Improve your business analysis skills
- Enhance your market understanding and improve your service levels to increase your return on investment. Each rule is followed by action points that will direct your investment decision making and increase your confidence.

 This book presents critical studies of modern reconfigurations of conceptions of the past, of the 'classical', and of national heritage. Its scope is global (China, India, Egypt, Iran, Judaism, the Greco-Roman world) and inter-disciplinary (textual philology, history of art and architecture, philosophy, gardening). Its emphasis is on the complexity of the modernization process and of reactions to it: ideas and technologies travelled from India to Iran and from Japan to China, while reactions show tensions between museumization and the recreation of 'presence'. It challenges readers to rethink the assumptions of the disciplines in which they were trained

Her family had a strong agricultural background which exposed her to the varieties of foods revered by the Filipinos. She always watched her mum prepare great Filipino delicacies with great interest and enthusiasm. Melanie moved to the United States in the late 90s when her Father, John Diwata, got a job in a food processing plant based in Monterey County, California. She was introduced to the Instant Pot by her friend, Jane Richie, at college. Since then, she has used the Instant Pot to prepare tasty Filipino meals that have earned her the respect of the community where she lives. Encouraged by the support she got, she decided to write the book titled "The Filipino Instant Pot Cookbook for Beginners." Sense Perception in the
British Novel of the 1980s
and 1990s

Fiction is fascinating. All it provides us with is black letters on white pages, yet while we read we do not have the impression that we are merely perceiving abstract characters. Instead, we see the protagonists before our inner eye and hear their voices.

Descriptions of sumptuous meals make our mouths

water, we feel physically repelled by depictions of violence or are aroused by the erotic details of sexual conquests. We submerge ourselves in the fictional world that no longer stays on the paper but comes to life in our imagination. Reading turns into an out-of-the-body experience or, rather, an in-another-body experience, for we perceive the portrayed world not only through the protagonist's eyes but also through his ears, nose, tongue, and skin. In other words, we move through the literary text as if through a virtual reality. How does literature achieve this trick? How does it turn mere letters into vividly experienced worlds? This study argues that techniques of sensuous writing contribute decisively to bringing the text to life in the reader's imagination. In detailed interpretations of British novels of the 1980s and 1990s by writers such as John Berger, John Banville, Salman Rushdie, Jeanette Winterson, or J. M. Coetzee, it uncovers literary strategies for turning the sensuous experience into words and for conveying it to the reader, demonstrating how we make sense in, and of, literature. Both readers interested in the

contemporary novel and in the sensuousness of the reading experience will profit from this innovative study that not only analyses the interest of contemporary authors in the senses but also pin-points literary entry points for the sensuous force of reading.

Your mind is not built to make you happy; it's built to help you survive. So far, it's done a great job! But in the process, it may have developed some bad habits, like avoiding new

experiences or scrounging around for problems where none exist. Is it any wonder that worry, bad moods, and self-critical thoughts so often get in the way of enjoying life? Based in acceptance and commitment therapy (ACT), *The User's Guide to the Human Mind* is a road map to the puzzling inner workings of the human mind, replete with exercises for overriding the mind's natural impulses toward worry, self-criticism, and fear, and helpful tips for acting in the service of your values and emotional well-being—even when your mind has other plans.

- Find out how your mind tries to limit your behavior and your potential
- Discover how pessimism functions as your mind's

- Learn why you shouldn't believe everything you think
- Overrule your thoughts and feelings and take charge of your mind and your life

'I want you to change the next wicked person you see into a tiger,' demanded Lionel. 'A very large tiger.' Heckie is not just a witch – she's an animal witch, who wants to make the world a better place by transforming evil people into harmless animals, using her incredible Toe of Transformation and her awesome Knuckle of Power. But when slimy Lionel Knapsack charms Heckie, her magic begins to take a darker direction. Her friends, including a cheese wizard and a boy called Daniel, must come to the rescue . . .

The Internet to the Inner-Net

Over twenty years ago, Godine published the first English translation of Georges Perec's masterpiece, *Life A User's Manual*, hailed by the Times Literary Supplement, Boston Globe, and others as "one of the great novels of the century." We are now proud to announce a newly revised twentieth-anniversary edition of this classic. Structured around a single moment in time - 8:00 PM on June 23, 1975 - Perec's spellbinding puzzle begins in an apartment block in the XVIIth arrondissement of Paris where, chapter by chapter, room by room, the extraordinarily rich life of its inhabitants is marvelously revealed.

PUBLISHERS WEEKLY: "An unusually lighthearted apocalyptic tale." Sam Terra is having a bad week. He lost Molly, the woman he secretly loves, when she vanished before his eyes at the exact same time that ten percent of the inhabitants of Earth disappeared. Naturally upset, Sam follows clues about the global vanishing with questionable help from his friends including a misanthropic co-worker and a childhood pal. When Molly reappears in the body of a man during a night of monster-laden devastation, Sam finally learns the truth. Not just about her, but about the planet Earth and the entire cosmos surrounding it. What we consider mundane reality, others consider

a game . . . and not a very good one. The whole thing is about to be shut down.
