The Reproductive Husbandry of Pythons and Boas

Handbook of Bayesian Variable Selection

Hatcher's Notebook

This book details the caging, feeding, health issues, breeding, and egg incubation of ball pythons.

This book was written to interest the reader in gun design. The gun industry needs and is due for the next big breakthrough. Every 100 years seems to bring the next big development in firearms technology. In the 1600's the wheel lock was developed and heralded the first use of firearms. In the 1700's came the flintlock musket. In the 1800's came the percussion cap and later in the century the thin brass shell to carry the powder, ball ammunition, and primer was perfected. While the 20th century has seen the invention of liquid propellant, caseless ammunition, and the gyrojet, the thin brass shell has been hard to beat and is still the dominant way to feed ammunition to the firearms of today. We are due for the next big advance, but from where will it come? This book was written to interest the reader on the simplicity and the hidden complexity that good gun designs exhibit and prompt the imagination of the reader to investigate the field of firearms design further. Reading this book will give the reader: • Three ways to calculate the round per minute level of a .45 caliber submachine gun using the M1A1 Thompson Submachine gun as an example and gives sample excel spreadsheets to allow the reader to experiment with different design conditions. • The full technical data package of a reverse engineered M1A1 Thompson Submachine gun. The drawings are shown as individual operation process sheets showing the dimensions for each separate cut on an individual drawing. • The cycle of operations of the M1A1 with illustrations. • The analysis and sample calculations to design an oval magazine spring. This book is unique as it is not a picture book of firearms, a combat guide on how to use them, nor discusses their maintenance or care. It does expose the engineering that can go behind a gun design project. This book not only gives the reader the drawings for a gun but also explains the engineering and dynamics behind it.

John Nosler - Going Ballistic is the story of John Nosler - a hunter, innovator and self-taught ballistics engineer. Born in California, he came of age in the Great Depression and raced his home-built cars on the dirt tracks of Huntington Beach and Pomona. From California, he moved to Oregon and embarked on a legendary big game hunting career. He first hunted moose in Canada in the 1940s and recognized the need for a projectile that would stand up to the velocity generated by the new magnum rifle cartridges. When hunters want a bullet they can depend on, the name they trust, more than any other, is Nosler. From the Partition, introduced to the shooting public in the late 1940s, to the Zippedo, Solid Base and Ballistic Tip, to today's cutting-edge AccuBond, John Nosler built a reputation on accuracy and performance, one bullet at a time. You know his bullets, now read his story.

What is the relationship between capitalism and mental

health? In his most unsettling book to date, Franco "Bifo" Berardi embarks on an exhilarating journey through philosophy, psychoanalysis and current events, searching for the social roots of the mental malaise of our age. Spanning an array of horrors – the Aurora "Joker" killer; Anders Breivik; American school massacres; the suicide epidemic in Korea and Japan; and the recent spate of "austerity" suicides in Europe – Heroes dares to explore the darkest shadow cast by the contemporary obsession with relentless competition and hyper-connectivity. In a volume that crowns four decades of radical intellectual work, Berardi develops the psychoanalytical insights of his friend Félix Guattari and proposes dystopian irony as a strategy to disentangle ourselves from the deadly embrace of absolute capitalism.

Reading this book will give the reader: • Two ways to calculate the round per minute level of a 9mm caliber submachine gun using the STEN submachine gun as an example and gives sample excel spreadsheets to allow the reader to experiment with different design conditions. • The full technical data package of a reverse engineered STEN Submachine gun. Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

The legendary British, World War II STEN submachine gun is featured in this concise, illustrated book. Famous for its use by British elite forces, as well as

the French underground during WWII, variants of the STEN were manufactured and used by many countries during the war and up through the 1970s. Beginning with its initial design and construction, the Mk.I and Mk.I*, Mk.II, Mk.III, and Mk.5 versions are presented in detail, including up-close images of manufacturer's markings. Superb war-era photographs show the various STEN models in combat use. Select foreign variants also discussed include French, Polish, and German types. STEN accessories such as magazines, ammunition, silencers, and bayonets are featured throughout the book, as well as rarely seen WWII-related uniform and equipment items. Application for Employment I refer to the recent death of the Technical Manager at your company and hereby apply for the replacement of the deceased manager. Each time I apply for a job, I get a reply that there is no vacancy but in this case I have caught you red-handed and you have no excuse because I even attended the funeral to be sure that he was truly dead and buried before applying. Attached to my letter is a copy of my CV and his death certificate. Crap CVs is a hilarious compilation of the worst job applications imaginable, including overly-honest cover letters, embarrassing typos, mortifying personal revelations, awkward interview questions, misplaced self-confidence, self-aggrandizing gibberish, blatant truth-twisting and, of course, outright lies.

"Bayesian variable selection has experienced substantial developments over the past 30 years with the proliferation of large data sets. Identifying relevant variables to include in a model allows simpler interpretation, avoids overfitting and multicollinearity, and can provide insights into the mechanisms underlying an observed phenomenon. Variable selection is especially important when the number of potential predictors is substantially larger than the sample size and sparsity can reasonably be assumed. The Handbook of Bayesian Variable Selection provides a comprehensive review of theoretical, methodological and computational aspects of Bayesian methods for variable selection. The topics covered include spike-and-slab priors, continuous shrinkage priors, Bayes factors, Bayesian model averaging, partitioning methods, as well as variable selection in decision trees and edge selection in graphical models. The handbook targets graduate students and established researchers who seek to understand the latest developments in the field. It also provides a valuable reference for all interested in applying existing methods and/or pursuing methodological extensions"--

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

The use of remote sensors for human settlement mapping and monitoring holds great promise for numerous fields of study, including urban planning and global environmental change and sustainability. While the potential for this technology is difficult to measure, achieving useful results at a regional or global level is but a recent accomplishment. Global Mapping of Human Settlement is the first book to provide a comprehensive overview of the methodologies, datasets, and approaches related to the use of remotely sensed data to map human settlements at the global scale, as well as the experiences encountered with their application. Valuable to a broad range of researchers, the book begins by analyzing the requirements for global and regional urban remote sensing. It provides a general background of global urban issues, outlines observation and assessment requirements, and looks at how these relate to current initiatives on international policy and strategic levels. The contributors, an international group of pioneering experts, describe the characteristics of human settlements as seen and

mapped from remote sensors, either at the regional or global scale. They also discuss the spectral variety, special scales, and nighttime appearance as key remote sensing indicators of these environments. The text explores some of the most acclaimed and important projects and programs previously carried out or in current use for urban mapping and monitoring. These chapters highlight the impressive amount of information available and the processing and analysis techniques used to extract such data from several data sources, including satellite imagery. The book also explores some of the future challenges and makes recommendations regarding areas of research that should be actively pursued. DVD Included to Complement the Text To provide readers with the opportunity to experience the latest tools, the editors supplement the text with a DVD that provides samples of the latest products. These will assist readers in testing approaches proposed in the book.

The Sten submachine gun — officially the 'Carbine, Machine, Sten' — was developed to fulfill the pressing British need for large quantities of cheaply produced weapons after Dunkirk, when German invasion was a very real possibility. Over four million were built during World War II, and the Sten was widely used by airborne troops, tankers, and others who needed a compact weapon with substantial firepower. It proved especially popular with Resistance fighters as it was easy to conceal, deadly at close range, and could fire captured German ammunition — with a design so simple that Resistance fighters were able to produce them in bicycle shops. Featuring vivid first-hand accounts, specially commissioned full-colour artwork and close-up photographs, this is the fascinating story of the mass-produced submachine gun that provided Allied soldiers and Resistance fighters with devastating close-range firepower.

Ancient Southeast Asia provides readers with a much needed synthesis of the latest discoveries and research in the archaeology of the region, presenting the evolution of complex societies in Southeast Asia from the protohistoric period, beginning around 500BC, to the arrival of British and Dutch colonists in 1600. Well-illustrated throughout, this comprehensive account explores the factors which established Southeast Asia as an area of unique cultural fusion. Miksic and Goh explore how the local population exploited the abundant resources available, developing maritime transport routes which resulted in economic and cultural wealth, including some of the most elaborate art styles and monumental complexes ever constructed. The book 's broad geographical and temporal coverage, including a chapter on the natural environment, provides readers with the context needed to understand this staggeringly diverse region. It utilizes French, Dutch, Chinese, Malay-Indonesian and Burmese sources and synthesizes interdisciplinary theoretical perspectives and data from archaeology, history and art history. Offering key opportunities for comparative research with other centres of early socio-economic complexity, Ancient Southeast Asia establishes the area 's importance in world history.

This work deals with the classification, construction, design and theory of different kinds of small arms (hand-firing weapons, heavy machine guns and small-calibre automatic cannons). It provides the necessary knowledge and information to designers, workers in research and development, students at military colleges and all those with an interest in firearms.

This book offers rich critical perspectives on the marketing of a variety of toys, brands, and product categories. Topics include marketing undertaken by specific children 's toy brands such as American Girl, Barbie, Disney, GoldieBlox, Fisher-Price, and LEGO, and marketing trends characterizing broader toy categories such as on-trend grotesque toys; toy firearms; minimalist toys; toyetics; toys meant to offer diverse representation; STEM toys; and unboxing videos. Toy marketing warrants a sustained scholarly critique because of toys ' cultural significance and their roles in children 's lives, as well as the industry 's economic importance. Discourses surrounding toys—including who certain toys are meant for

and what various toys and brands can signify about their owners ' identities—have implications for our understandings of adults ' expectations of children and of broader societal norms into which children are being socialized.
