Many types of valves are required in a process plant for flow regulation or on/off purpose. Type of valve employed depends on nature of fluid, flow control required, operating pressure and temperatures as well as surround atmosphere. Here is a list of symbols for various types of valves used in process industry.

Manual valves operate in a similar manner, but there are many different types. The main function of the manual valve is to connect hydraulic pressure to the clutches or brakes connected to a Forward, Manual shift, Reverse or Park position through the positioning of shift and/or regulating valves.
