Security cameras - megapixel vs TV lines

Resolution can be defined as the fineness of detail that can be distinguished in an image. In CCTV cameras, resolution is measured in TV Lines (TVL). A higher number of TVL means that a camera will be able to render images with more detail. However, TVL is not the sole factor that determines the quality of the final output.

Camera Resolution and TV Lines (TVL) | Lorex

Television lines (TVL) is a specification of an analog camera's or monitor's horizontal resolution power. The TVL is one of the most important resolution measures in a video system. The TVL can be measured with the standard EIA-1956 resolution chart.

Television lines - Wikipedia

For the most part, nowadays analog cameras provide a line resolution range between a 420TVL to 700TVL. For close-up & short distances, a lower TVL resolution camera can save you some money and provide an adequate image for your criteria but a 700TVL and above have superior images.

Difference In DVR Resolutions - Security Camera King

Effective pixels = 768 (Horizontal) X 494 (Vertical) Horizontal resolution = 540 TV lines
The difference between the two is pixel aspect ratio and picture aspect ratio. The pixel aspect ratio has to do with the actual number of pixels that sensor is able to capture. The picture aspect ratio is based on what the NTSC standard for analog signals ...

What is TVL in relation to Security Camera Specifications?

Commonly you will see 380, 420, 480 and 540 resolution options on standard CCTV security cameras. 420 cameras are fine to be used in some locations if you are not wanting that much actual detail. It would be much better to go with a 480 or even all the way to 540 TVL. There are many lower cost cameras manufactured in China that have 420 TVL.
