Comparative Federalism: A Systematic Inquiry, Second Edition is a uniquely comprehensive, analytic, and genuinely comparative introduction to the principles and practices, as well as the institutional compromises, of federalism. Hueglin and Fenna draw from their diverse research on federal systems to focus on four main models--America, Canada, Germany, and the European Union--but also to range widely over other cases. At the heart of the book is careful analysis of the relationship between constitutional design and amendment, fiscal relations, institutional structures, intergovernmental relations, and judicial review. Such analysis serves the dual role of helping the reader understand federalism and providing a comparative framework from which to assess the record of federal systems. The second edition has been extensively revised and updated, taking into account new developments in federal systems and incorporating insights from the growing body of literature in the field. It includes two new chapters, "Fiscal Federalism" and "The Limits of Federalism."

A TIME and NEW YORK TIMES TOP 10 BOOK OF THE YEAR * New York Times Notable Book and Times Critic 's Top Book of 2018 NAMED ONE OF THE BEST BOOKS OF 2018 BY * Elle * Bustle * Kirkus Reviews * Lit Hub* NPR * O, The Oprah Magazine * Shelf Awareness The bestselling and critically acclaimed debut novel by Lisa Halliday, hailed as "extraordinary" by The New York Times, "a brilliant and complex examination of power dynamics in love and war" by The Wall Street Journal, and "a literary phenomenon" by The New Yorker. Told in three distinct and uniquely compelling sections, *Asymmetry* explores the imbalances that spark and sustain many of our most dramatic human relations: inequities in age, power, talent, wealth, fame, geography, and justice. The first section, "Folly," tells the story of Alice, a young American editor, and her relationship with the famous and much older writer Ezra Blazer. A tender and exquisite account of an unexpected romance that takes place in New York during the early years of the Iraq War, "Folly" also suggests an aspiring novelist's coming-of-age. By contrast, "Madness" is narrated by Amar, an Iraqi-American man who, on his way to visit his brother in Kurdistan, is detained by immigration officers and spends the last weekend of 2008 in a holding room in Heathrow. These two seemingly disparate stories gain resonance as their perspectives interact and overlap, with yet new implications for their relationship revealed in an unexpected coda. A stunning debut from a rising literary star, *Asymmetry* is "a transgressive roman a clef, a novel of ideas, and a politically engaged work of metafiction" (The New York Times Book Review), and a "masterpiece" in the original sense of the word" (The Atlantic). Lisa Halliday's novel will captivate any reader with while also posing arresting questions about the very nature of fiction itself.

Existentialism, as a philosophy, gained prominence after World War II. Instead of focusing upon a particular aspect of human existence, existentialists argued that our focus must be upon the whole being as he/she exists in the world. Rebellious against the rationalism of such philosophers as Descartes and Hegel, existentialists reject the emphasis placed on man as primarily a thinking being. Freedom is central to human existence, and human relations and encounters cannot be reduced simply to "thinking." This Dictionary provides--through alphabetically arranged entries--overviews of the various tenets, philosophers, and writers of existentialism, and of those writers/philosophers who, in retrospect, seem to existentialists to espouse their philosophy: Nietzsche, Kierkegaard, Dostoyevski, et al.

This volume is a sampling of quips, verses, drawings, and even the music of one of the most original and versatile minds of the twentieth century, Kenneth Boulding prominent economist, lecturer, and author. The driving force behind Kenneth Boulding's wideranging book is that he truly enjoys all that he does. Indeed, his greatest accomplishment may very well be that he was a profoundly happy man. This is reflected in works that are laced with beauty, wit, and extraordinary imagery--works that are often composed and appeared in the most unexpected of places. In the midst of one of the classic textbooks of his generally staid profession, *Economic Analysis*, Boulding introduced the "bathtub theorem." *Illustrating Economics: Beasts, Ballads and Aphorisms* is a collection of similar instances and, as such, it is fun. The reader should be advised that the book contains traps. Boulding coats his ideas with sugar to please his audience as well as promote consumption. He describes peace as "a drab girl with an olive branch corsage whom no red-blooded American (or Russian)

could conceivably warm up to." The reader smiles at the recognition of the truth inherent within the image and ponders the irony of why so fine a state as peace should be regarded as dull, and so ugly a condition as war should be regarded as romantic. This book is for enjoyment, but it should carry the following warning: Caution--Reading this may be stimulating to your intellect.

Episodic memory is the name of the kind of memory that records personal experiences instead of the mere remembering of impersonal facts and rules. This type of memory is extremely sensitive to ageing and disease so an understanding of the mechanisms of episodic memory might lead to the development of therapies suited to improve memory in some patient populations. Episodic memory is unique in that it includes an aspect of self-awareness and helps us to remember who we are in terms of what we did and what we have been passed through and what we should do in the future. This book brings together a renowned team of contributors from the fields of cognitive psychology, neuropsychology and behavioural and molecular neuroscience. It provides a detailed and comprehensive overview of recent developments in understanding human episodic memory and animal episodic-like memory in terms of concepts, methods, mechanisms, neurobiology and pathology. The work presented within this book will have a profound effect on the direction that future research in this topic will take. - The first and most current comprehensive handbook on what we know about episodic memory, the memory of events, time, place, and emotion, and a key feature of awareness and consciousness - Articles summarize our understanding of the mechanisms of episodic memory as well as surveying the neurobiology of episodic memory in patients, animal studies and functional imaging work - Includes 34 heavily illustrated chapters in two sections by the leading scientists in the field As a young girl, Raychel Kubby Adler dreamed of having boobies. Wearing a polka-dot bikini top stuffed with Kleenex, she would stare in the mirror envisioning two beautiful coconuts. But in the next 36 years, her outlook shifts, and when she looks in the mirror, all she sees sitting on her chest are ticking time bombs. *Life in Asymmetry* tells the story of what happened in between. From the flatlands of puberty, across the boobie mountains of parenthood, and traversing the landmines of genetic breast cancer, Adler illuminates what it means to live with genetic cancer and to be a previvor. In this dazzling memoir, Adler looks at the interplay of genetics, personal choice and chance that shapes each of our lives and asks us to explore the course of actions we might take when offered a unique glimpse into our possible futures. By telling her story, Adler brightens the horizon for future generations of previvors, including her two daughters so that they may know the unmarred beauty of life's asymmetry. Let them imagine coconuts.

She's looking good . . . but Allison Avery can't believe it. Growing up with beautiful, blond sisters, Allison has always been the dark-haired, "interesting-looking" Avery. So when the devil shows up and offers to make her gorgeous, Allison jumps at the chance to finally get noticed. But there's one tiny catch, and it's not her soul: The devil wants her cell phone. Though her deal with the devil seems like a good idea at the time, Allison soon realizes that being gorgeous isn't as easy as it looks. Are her new friends and boyfriend for real, or do they just like her pretty face? Allison can't trust anyone anymore, and her possessed phone and her family's financial crisis aren't making things any easier. Plus, when she finds out that she might be America's next teen model, all hell breaks loose. Allison may be losing control, but how far is she willing to go to stay gorgeous forever? Following the critically acclaimed *Lucky*, Rachel Vail continues her poignant sisterhood trilogy with the rebellious middle Avery sister, Allison. Fiery, sarcastic, and just plain fun, gorgeous captures the heartbreak and hilarity in one girl's attempt to have it all.

A systematic effort to rethink Freud's theory of the unconscious, aiming to separate out the different forms of unconsciousness. The logico-mathematical treatment of the subject is made easy because every concept used is simple and simply explained from first principles. Each renewed explanation of the facts brings the emergence of new knowledge from old material of truly great importance to the clinician and the theorist alike. A highly original book that ought to be read by everyone interested in psychiatry or in Freudian psychology.

Knowing is less about information and more about transformation; less about comprehension and more about being apprehended. This radical book develops the notion of covenant epistemology--an innovative, biblically compatible, holistic, embodied, life-shaping epistemological vision in which all knowing takes the shape of interpersonal, covenantal relationship. Rather than knowing in order to love,

we love in order to know. Meek argues that all knowing is best understood as transformative encounter. Creatively blending insights from a diverse range of conversation partners--including Michael Polanyi, Michael D. Williams, Leslie Newbigin, Parker Palmer, John Macmurray, Martin Buber, and James Loder--Meek offers critically needed "epistemological therapy" in response to the pervasive and damaging presumptions that those in Western culture continue to bring to efforts to know. The book's innovative approach--an unfolding journey of discovery--through dialogue--itself subverts standard epistemological presumptions of timeless linearity. While it offers a sustained and sophisticated philosophical argument, *Loving to Know's* texts and textures interweave loosely to effect therapeutic epistemic transformation in the reader.

The challenges to humanity posed by the digital future, the first detailed examination of the unprecedented form of power called "surveillance capitalism," and the quest by powerful corporations to predict and control our behavior. In this masterwork of original thinking and research, Shoshana Zuboff provides startling insights into the phenomenon that she has named surveillance capitalism. The stakes could not be higher: a global architecture of behavior modification threatens human nature in the twenty-first century just as industrial capitalism disfigured the natural world in the twentieth. Zuboff vividly brings to life the consequences as surveillance capitalism advances from Silicon Valley into every economic sector. Vast wealth and power are accumulated in ominous new "behavioral futures markets," where predictions about our behavior are bought and sold, and the production of goods and services is subordinated to a new "means of behavioral modification." The threat has shifted from a totalitarian Big Brother state to a ubiquitous digital architecture: a "Big Other" operating in the interests of surveillance capital. Here is the crucible of an unprecedented form of power marked by extreme concentrations of knowledge and free from democratic oversight. Zuboff's comprehensive and moving analysis lays bare the threats to twenty-first century society: a controlled "hive" of total connection that seduces with promises of total certainty for maximum profit -- at the expense of democracy, freedom, and our human future. With little resistance from law or society, surveillance capitalism is on the verge of dominating the social order and shaping the digital future -- if we let it.

Selected Works by Michael Berry

Braille Book Review

This book addresses some of the baffling questions encountered at the final frontier of space and time related to particle physics and cosmology in the context of recent iconoclastic observations and developments. When particle physics stagnated in the early seventies, a new development emerged OCo String Theory. For the past 25 years, String Theory, popularly called the OC Theory of EverythingOCO, has mesmerized not just scientists, but also the general public. Yet a closer scrutiny today reveals that it is no more than a mathematical marvel. It has neither predicted anything nor has it been anywhere near verification. We are essentially where we were in the early seventies. Another chronic problem that Einstein had abandoned was the unified description of his theory of General Relativity that deals with the Universe at large and Electromagnetism which is to do with particles. Such a description is necessary even if it warrants a radical departure from our time-honoured ideas of space and time. A bright spot has now appeared in Cosmology. Iconoclastic observations in the past years have shown that the Universe is actually accelerating, driven by a mysterious Dark Energy. This book takes the lay reader through these uncharted waters and mind-boggling developments on an unimaginable journey from the ultra small to the farthest stretches conceivable, via such imagination defying concepts as extra dimensions and multiple universes. Sample Chapter(s). Chapter 1: The Lord is subtle, but defies commonsense! (120 KB). This book carries forward the discourse on the mind's engagement with the world. It reviews the semantic and metaphysical debates around internalism and externalism, the location of content and the indeterminacy of meaning in language. The volume analyzes the writings of Jackson, Chomsky, Putnam, Quine, Bilgrami and others, to reconcile opposing theories of language and the mind. It ventures into Cartesian ontology and Fregean semantics to understand how mental content becomes world-oriented in our linguistic communication. Further, the author explores the liaison between the mind and the world from the phenomenological perspective, particularly, Husserl's linguistic turn and Heidegger's intersubjective entreaty for Dasein. The book conceives of thought as a biological and socio-linguistic product which engages with the mind-world question through the conceptual and causal apparatuses of language. A major intervention in the field of philosophy of language, this book will be useful for scholars and researchers interested in philosophy, phenomenology, epistemology and metaphysics.
